Extracting and Visualizing Stock Data

Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

0.1 Define Graphing Function

(1.0.5)

In this section, we define the function make_graph. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
[3]: def make_graph(stock_data, revenue_data, stock):
         fig = make_subplots(rows=2, cols=1, shared_xaxes=True,_
      -subplot_titles=("Historical Share Price", "Historical Revenue"),
      overtical_spacing = .3)
         fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data.Date,_
      sinfer_datetime_format=True), y=stock_data.Close.astype("float"), name="Share_
      ⇔Price"), row=1, col=1)
         fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data.Date,_
      →infer_datetime_format=True), y=revenue_data.Revenue.astype("float"), __

¬name="Revenue"), row=2, col=1)
         fig.update_xaxes(title_text="Date", row=1, col=1)
         fig.update_xaxes(title_text="Date", row=2, col=1)
         fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
         fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
         fig.update_layout(showlegend=False,
         height=900,
         title=stock,
         xaxis_rangeslider_visible=True)
         fig.show()
```

0.2 Question 1: Use yfinance to Extract Stock Data

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is TSLA.

```
[4]: tesla = yf.Ticker("TSLA")
```

Using the ticker object and the function history extract stock information and save it in a dataframe named tesla_data. Set the period parameter to max so we get information for the maximum amount of time.

```
[5]: tesla_data = tesla.history(period="max")
```

Reset the index using the reset_index(inplace=True) function on the tesla_data DataFrame and display the first five rows of the tesla_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
[6]: tesla_data.reset_index(inplace=True) tesla_data.head()
```

```
[6]:
                  Open
                         High
                                 Low
                                     Close
                                              Volume Dividends
                                                                Stock Splits
            Date
    0 2010-06-29 3.800
                        5.000 3.508
                                      4.778 93831500
                                                                         0.0
    1 2010-06-30 5.158
                        6.084 4.660 4.766 85935500
                                                             0
                                                                         0.0
    2 2010-07-01 5.000

                                                             0
                                                                         0.0
                        4.620 3.742 3.840
    3 2010-07-02 4.600
                                           25699000
                                                             0
                                                                         0.0
    4 2010-07-06 4.000 4.000 3.166 3.222 34334500
                                                             0
                                                                         0.0
```

0.3 Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the requests library to download the webpage https://www.macrotrends.net/stocks/charts/TSLA/tesla/reversive the text of the response as a variable named html_data.

```
[7]: url= "https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue" html_data=requests.get(url).text
```

Parse the html data using beautiful_soup.

```
[8]: soup = BeautifulSoup(html_data,"html5lib")
```

Using beautiful soup extract the table with Tesla Quarterly Revenue and store it into a dataframe named tesla_revenue. The dataframe should have columns Date and Revenue. Make sure the comma and dollar sign is removed from the Revenue column.

```
[9]: Date Revenue
0 2020-12-31 10744
1 2020-09-30 8771
2 2020-06-30 6036
3 2020-03-31 5985
4 2019-12-31 7384
```

Click here if you need help removing the dollar sign and comma

```
If you parsed the HTML table by row and column you can use the replace function on the string revenue = col[1].text.replace("$", "").replace(",", "")
```

If you use the read_html function you can use the replace function on the string representation

```
tesla_revenue["Revenue"] = tesla_revenue["Revenue"].str.replace("$", "").str.replace(",",
```

Remove the rows in the dataframe that are empty strings or are NaN in the Revenue column. Print the entire tesla_revenue DataFrame to see if you have any.

```
[10]: tesla_revenue
```

```

Click here if you need help removing the Nan or empty strings

If you have NaN in the Revenue column

```
tesla_revenue.dropna(inplace=True)
```

If you have emtpty string in the Revenue column

```
tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the tesla_revenue dataframe using the tail function. Take a screenshot of the results.

```
[11]: tesla_revenue.dropna(inplace=True)
tesla_revenue.tail()
```

```
[11]:

0.4 Question 3: Use yfinance to Extract Stock Data

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is GME.

```
[12]: gamestop = yf.Ticker("GME")
```

Using the ticker object and the function history extract stock information and save it in a dataframe named gme_data. Set the period parameter to max so we get information for the maximum amount of time.

```
[13]: gme_data=gamestop.history(period="max")
```

Reset the index using the reset_index(inplace=True) function on the gme_data DataFrame and display the first five rows of the gme_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

```
[14]: gme_data.reset_index(inplace=True)
gme_data.head()
```

```

```

0.5 Question 4: Use Webscraping to Extract GME Revenue Data

Use the requests library to download the webpage https://www.macrotrends.net/stocks/charts/GME/gamestop/s Save the text of the response as a variable named html_data.

```
[15]: url="https://www.macrotrends.net/stocks/charts/GME/gamestop/revenue" html_data=requests.get(url).text
```

Parse the html data using beautiful soup.

```
[16]: soup = BeautifulSoup(html_data,"html5lib")
```

Using beautiful soup extract the table with GameStop Quarterly Revenue and store it into a dataframe named gme_revenue. The dataframe should have columns Date and Revenue. Make sure the comma and dollar sign is removed from the Revenue column using a method similar to what you did in Question 2.

Display the last five rows of the gme_revenue dataframe using the tail function. Take a screenshot of the results.

```
[18]: gme_revenue.dropna(inplace=True) gme_revenue.tail()
```

```
[18]: Date Revenue
59 2006-01-31 1667
60 2005-10-31 534
61 2005-07-31 416
62 2005-04-30 475
```

0.6 Question 5: Plot Tesla Stock Graph

Use the make_graph function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the make_graph function is make_graph(tesla_data, tesla_revenue, 'Tesla')

[19]: make_graph(tesla_data, tesla_revenue, 'Tesla Stock Data Graph')

0.7 Question 6: Plot GameStop Stock Graph

Use the make_graph function to graph the GameStop Stock Data, also provide a title for the graph. The structure to call the make_graph function is make_graph(gme_data, gme_revenue, 'GameStop').

[64]: make_graph(gme_data, gme_revenue, 'GameStop Stock Data Graph')

About the Authors:

Joseph Santarcangelo has a PhD in Electrical Engineering, his research focused on using machine learning, signal processing, and computer vision to determine how videos impact human cognition. Joseph has been working for IBM since he completed his PhD.
